

BREAKING NEWS BREAKING NEWS BREAKING NEWS BREAKING NEWS BREAKING NEWS

Universal Terminal Project in Singapore – Asia’s largest oil terminal with storage capacity of 2.3 million cubic meters or 14.5 million barrels of petroleum products.

We are very pleased to announce that our customers have decided to place their multi-million dollar purchase order for the supply of 38 sets of our FMC Smith 12” PD Meters with pulse transmitters, 38 sets of 12” pipeline strainers and two pipeline bi-directional provers. This is the largest quantity made in a single purchase order in our business’ history so far.

We are indeed very excited with our customers’ final choice of our PD meters over other flow meters technologies available in the markets. They have evaluated Liquid Ultrasonic flow meters, Coriolis Mass flow meters and Turbine flow meters and decided that our Positive Displacement (PD) flow meters are the most suitable flow meters to suit their overall application and long term needs.

Our customers’ choices of our PD meters were strongly based on our better technical design, lowest pressure drop, very stable accuracy and ease in maintenance. The other beauty of our PD meters is the ease in calibration as it is a requirement by the local authority since the flow meters are to be used in custody transfer application.

Bi-Di Prover

On top of that, our customers had visited some of our existing customers who have been using our PD Meters for many years and the visits had greatly impressed them and further strengthened their beliefs in our PD Meters’ reliable performances as well as our capabilities to provide our prompt after sales services.

This is a very prestigious project that we are very proud of and we would like to take this opportunity to express our sincerest appreciations for the support and confidence in us to our below listed customers and business partners.
